REQUIREMENT TABLE

REQ ID	TYPE	DESCRIPTION	PRIORITY	ACCEPTANCE CRITERIA	RATIONALE	COMMENTS
FR-001	Functional	The system shall match lost baggage reports with airport scan records.	High	If the bag is found in the records, a recovery alert is generated.	Helps find lost bags quickly.	The system should avoid matching the wrong baggage.
FR-002	Functional	The system shall allow passengers to report lost baggage.	High	A claim ID is given after a valid report is submitted.	Starts the baggage recovery process.	The details needed for the report should be specified.
FR-003	Functional	The system shall show the baggage scan history and current status.	High	The scan history is shown in the correct order with the latest status.	Helps passengers track their baggage.	The system should clearly show the latest baggage status.
FR-004	Functional	The system shall allow baggage agents to update the claim status.	High	The updated status is saved and shown on the claim.	Keeps the claim information updated.	The different claim statuses should be specified.
FR-005	Functional	The system shall start the compensation process for eligible claims.	Medium	Only eligible claims start the compensation process.	Makes compensation faster.	The conditions for getting compensation should be specified.
NFR-001	Nonfunctional	The system shall return the baggage scan history in under 200 ms.	High	The scan history is returned in less than 200 ms.	Keeps the system fast.	The 200 ms limit is already given in the problem statement.
NFR-002	Nonfunctional	The system shall allow only authorized users to view or change claims.	High	Unauthorized users are not allowed to access or change claims.	Keeps passenger information safe.	The users who are allowed to access claims should be specified.

USE-CASE FLOW SPECIFICATION

Register Lost Baggage Claim

Use Case ID	UC-01	**Actor**	Passenger
System	Airport Lost Luggage Claim & Tracking Portal	**Priority**	High

.

1. Main Success Scenario

1. The passenger selects “Report Lost Baggage”.
2. The system displays the lost baggage claim form.
3. The passenger enters the required flight and baggage details.
4. The system checks that the entered information is valid.
5. The system checks the available baggage scan records.
6. The system creates the lost baggage claim.
7. The system generates a unique claim ID.

8. The system shows a confirmation message to the passenger.

2. Alternate Flow - Invalid Baggage Details

9. The passenger enters an incorrect or invalid bag-tag number.
10. The system detects the invalid information.
11. The system shows an error message.
12. The passenger is asked to enter the details again.
13. Once valid details are entered, the process continues from Step 4.
